

# Project management

We help you keep control of dates, content, milestones, resources and costs.

**Projects succeed when cooperation works. We have a team of experienced project managers on hand to help you make your security projects a reality and ensure a secure digitalisation process according to plan.**

**Are you able to implement your IT security projects as planned? Do you make informed decisions while retaining an overview, and do you know the risks of your projects?**

IT security departments of corporate customers are under pressure to take action. This means implementing numerous projects simultaneously without going over deadline or budget.

On top of that, companies have to adhere to compliance requirements, which means clear, traceable documentation of decisions, quality controls, delivery approvals, risks and budgets. And finally, incorrect implementation can expose your business to unnecessary cyber risks that could harm your reputation and cause operational and financial damage.

The project managers at Swiss IT Security AG will help you overcome these challenges. We can take care of planning, progress reviews and coordination and assist you in coming up with the right decisions and solutions. We work around your processes and IPMA or Hermes standards, and use our experience for your benefit.

## Reliability

Implementing IT projects according to plan doesn't happen by chance, which is why all our project managers undergo a training programme with IPMA or Hermes certification.

They are in constant dialogue within the team, backed up by the entire organisation of Swiss IT Security AG.

## Collaborative partnership

Our benchmark is your project's success. So we provide candid information tailored to your requirements across all aspects of a project.

This ensures that you can keep an eye on the project status as well as any problems and risks at all times and are able to make informed decisions.

## Teamwork

Projects succeed when cooperation works. We have a lot of experience in collaborating with our customers' interdisciplinary teams and service providers, and we promote teamwork.

## IT security project management

### Agile or waterfall

When we work on a project, we take your project management model as a basis and can offer reliable results using classic and agile approaches alike.

### IT security included

Project managers at Swiss IT Security AG all have backgrounds in IT security consulting or engineering and are able to consult with the internal team. This facilitates communication with specialists and understanding of upcoming project tasks.

### Integrated project management

Our core competencies lie in technical project management, which also includes progress reviews and reporting.

If desired, we can also take care of further aspects of IT project management including controlling and project documentation tracking (e.g. change management).

### Integration in customer projects

We base our work around your project organisation. We have a lot of experience in collaborating with our customers' interdisciplinary teams and service providers, and we promote teamwork.

### Programme management

Along with individual projects, we can manage entire programmes. We have a wealth of experience at programme level and the right tools at our disposal (e.g. leading teams of project managers or general coordination and reporting).

### Compliance

Our project managers are experienced in handling internal standards and specifications that apply to traceable project documentation and compliance with 'Secure Development and Lifecycle Processes (SDLC)'.

### Project advisory

Do you need a second opinion or support with your project decisions concerning a specific project?

Our project managers can take on an advisory role, drawing on their extensive experience.
